

Income Opportunities

Seeking alternative sources of income

December 2025

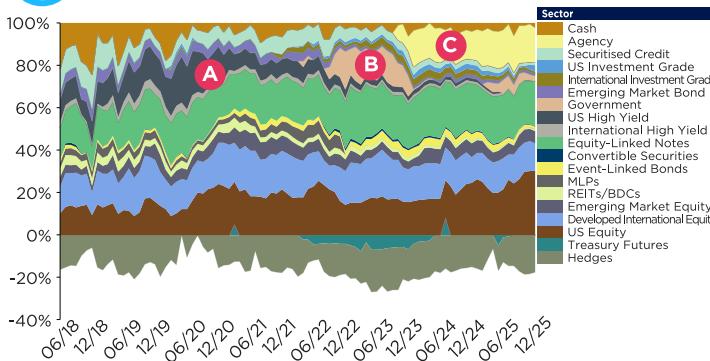

Important Information

- 1 The fund invests in a broad range of income-producing securities from around the world.
- 2 Investing in this fund may expose investors to exchange/currency risk, equity risk, equity-linked instruments risk, volatility risk, emerging markets risk and European sovereign-debt crisis risk. It may also involve risk relating to dynamic asset allocation strategy, risks associated with debt securities, subordinated bonds and perpetual bonds, as well as risk associated with regulatory/exchange requirements/policies of certain markets/regions.
- 3 The fund may use financial derivative instruments (FDI) for hedging, for efficient portfolio management and as a way to gain exposure (long or short) to various assets, markets or other investment opportunities. FDI exposure may involve additional risks such as credit/counterparty risk, volatility and liquidity risk, valuation risk and over-the-counter transaction risk. The fund may be leveraged and suffer losses from its FDI usage.
- 4 RMB is currently not freely convertible and is subject to exchange controls and restrictions. Under exceptional circumstances, payment of redemptions and/or dividend payment in RMB may be delayed due to the exchange controls and restrictions applicable to RMB.
- 5 For hedged classes, there is no guarantee that the hedging techniques employed by the manager will fully and effectively achieve the desired result and effect. Furthermore the volatility of the hedged classes may be higher than that of the equivalent class denominated in the fund's base currency. If the counterparties of the instruments used for hedging purpose default, investors of the hedged classes may be exposed to currency exchange risk of the currency of denomination of the relevant class on an unhedged basis and may therefore suffer further losses.
- 6 For distribution class, the fund may at its discretion determine to pay dividends out of income or capital or effectively out of capital of the fund. Payment of dividends out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the fund's capital or payment of dividends effectively out of the fund's capital (as the case may be) may result in an immediate reduction of the net asset value per share of the fund.
- 7 The value of the fund can be volatile and could go down substantially. Investors may suffer losses.
- 8 Investors should not only base on this marketing material alone to make investment decisions.

Why Amundi Funds Income Opportunities?

1 A True Diversifier - Non-Benchmark Constrained

Nimble allocation to thrive across diverse market cycles

A From Q2 2020 to Present: High Yield Exposure from 25% to 0%
Reduction in Corporate High Yield allocation from 25% (2020) to 0% (2025) driven by tightening corporate bonds spreads reaching 20Y lows in 2025.

B From Q1 2022 to Q4 2022: US Treasury Exposure from 0% to 17.8%
After yielding close to 0% since Covid, US Treasury yields started to provide value in 2022 as the Fed initiated interest rate hikes. To seize this opportunity, US Treasuries were incorporated to the portfolio for the first time since inception.

C From Q1 2023 to Present: MBS Exposure from 0% to 17%
During Q1 2023, US banking stress driven by higher interest rates resulted in weakened demand for Agency MBS, creating attractive valuations. The portfolio switched completely from US Treasuries to Agency MBS to capitalise on this opportunity.

(Dividend payment is not guaranteed and may be paid out of capital
(Important information point 6))

*Source: Amundi, latest dividend yield of A2 USD MTD 3 share class as of 31 December 2025. Positive distribution yield does not imply positive return. Dividend is not guaranteed. The Fund may pay dividends out of its capital. Annualised dividend yield = $[1+(1+\text{monthly distribution per unit/ex-dividend NAV})^{12-1}]$. The annualised dividend yield is calculated based on the last dividend distribution (ex-dividend date) with dividend reinvested, and may be higher or lower than the actual annual yield. Please refer to point 6 of the "Important Information".
